

How to unhide all rows & columns in Excel (mouse version)

In this article we will explain an easy way of unhiding all rows and columns in Excel by use of the mouse.

1. Left click with the mouse in the upper left corner of the sheet, above row 1 and left of column A
2. Right click any row number or anywhere inside the sheet (but not on column letters).
3. Press [Unhide] in the pop-up menu.

All hidden rows should now be visible

4. Right click on any column letter.
(Only left click on column top letter will work.)
5. Press [Unhide] in the pop-up menu.

All hidden columns should now be visible

How to unhide all rows & columns in Excel (Keyboard version)

This part explains how to unhide all rows and columns in Excel by use of the keyboard.

1. Press **[Ctrl] + [A]** to select the complete sheet.
If only the part with data is selected, then hit [Ctrl] + [A] again.

2. Press **[Ctrl] + [Shift] + [9]** to unhide all rows.
(Use [9] above [I] and [O], not the Num-Lock [0])

All hidden rows should now be visible.

3. Press **[Ctrl] + [Shift] + [0]** to unhide all columns.
(Use [0] above [I] and [O], not the Num-Lock [0])

All hidden columns should now be visible.
